Hörmann Flexon Voted No. 1 in Professional Door Dealer Magazine's Best of Business Poll

Professional Door Dealer Magazine (PDD), recently announced that Hörmann Flexon LLC has been voted No. 1 in the industry's Best of Business dealers' choice poll, in the category of Best High-Speed Doors. The company also placed in three other categories included in the poll: Best Green Products, Best Safety Products and Best Vinyl Door Products.

The winners of the poll received recognition in the December issue of Professional Door Dealer Magazine.

Hörmann Flexon is a privately owned company and world leader in manufacturing high performance industrial doors, using German engineering and the best of US manufacturing, to offer the highest levels of quality, features and safety on the market. Their lean manufacturing operation based in Pennsylvania, is able to provide market-leading levels of delivery lead time and product value.

In 2008, Hörmann Flexon introduced the door community to the first-of-its-kind, Smart Start™ HFC1 plug-and-play style control box and the Speed-Commander™ 1400 SE self-repairing door. Then, in 2010, the Speed-Guardian™ 4000 U high speed security door was brought to market and has since been an extremely popular choice of automotive retail locations, as well as condominiums and secure parking garages.

In March of 2011, product enhancements were introduced to the Speed-Commander™ 1400 SEL and Speed-Master® 1600 L such as a light grid built into the guide tracks as standard equipment. The addition of the light grid instituted minor name changes to those models, with the letter "L" added to indicate the inclusion of the light grid. In June of 2011, the company implemented a 5S visual management program as the next step in striving to become a world-class, lean manufacturing operation. Since implementing the program, the company has experienced a 30 percent improvement in productivity which made it possible to achieve a 50 to 75 percent reduction in lead times, the fastest in the industry at this time. Additionally, in 2012 several new doors will be added to the high speed roll-up door line to accommodate various industry-specific needs.
