

LED Lite-Advance

Door monitoring and power loss indicator

Red and Green Light Visual Indicator Promotes Safety

Visual indicator signals motorized and pedestrian traffic

The LED Lite-Advance is a visual indicator, signaling approaching traffic that the door is open, closed or in motion. The Lites comes in 5 or 10 ft. lengths of bright LED light strips which attach to the guide tracks or hood. Lites are solid red when the door is down, flashing red when in motion, and solid green when completely open, increasing awareness which will reduce the likelihood of impact to the door, and minimize downtime.

Intelligent LED lites are IP68 rated

Waterproof, UV protected and IP68 rated, LED Lite-Advance lights are daylight visible for reliable performance no matter the location.

Red LED lights signal door is in motion or closed

User-programmable, the LED Lite-Advance can display any color as fixed or flashing. The system is easy to install on new or existing doors. Solid red Lites are visible when the door is completely closed. The Lites flash red when the door is closing and also if power is lost to door motor. (90 degree track mount shown top-right.)

Green LED lights signal traffic

The solid green light appears once the door is completely up indicating that it's safe to proceed through the opening. (Hood mount shown bottom-right.)

Three mounting configurations

Aluminum mounting hardware is available in three configurations: flush guide track mounting, 90 degree track mounting, and Lites may also be installed on the hood for additional visibility.

Red LED lights indicate door is in motion

Integrates with protection devices

Green LED lights signal traffic to enter
