

Smart Start™ NXT

Intelligent operator and control technology

HÖRMANN

Smart Start™ NXT – Intelligent operator and control technology

Hörmann is the number one supplier of this control box brand worldwide. Our 3-phase Smart Start™ NXT NEMA 4X control box is standard on most door models.

SMART

Color-coded plug-in control wiring

Smart connection of accessory components and safety devices during initial set-up is made easy with color-coded plug-in connections and cables.

Automatic timer with adjustable hold-open phase

Adjust the length of time the door remains open, up to 120 seconds, and reduce energy consumption on exterior door openings.

Error display screen

Access functions of the Smart Start™ NXT operator with the touchpad segment display. Clear error or fault codes with the touch of a button.

PRACTICAL

Frequency converter control

The Smart Start™ NXT uses frequency converter technology to gradually “ramp up” to the maximum operating speeds, which reduces wear on the door and all components, resulting in extended service life of the door.

Cycle counter

A built-in cycle counter conveniently displays the number of lifetime cycles the door has for at-a-glance ability to determine maintenance needs.

Multi-lingual functionality

Accommodate your region’s most common language requirements and choose from: English, Spanish, French, German or Italian.

CLEVER

Operation time monitoring

Details about door operation are continuously being recorded. This information makes it possible to receive data on functions, such as times of day that are the busiest and if the same error / fault codes are occurring regularly.

Service operation setting

A service operation setting removes the guess work when trying to remember when maintenance is required. The Smart Start™ NXT can provide maintenance alerts so scheduled maintenance inspections are prompted, ensuring dependable, long-term performance.

Remote Keypad

Streamline aesthetics for modern applications

More and more installations are requiring that the door control box is installed out of the reach of passersby or completely away from the door in a central location. For these types of applications, our remote keypad is the ideal option. The actual door control box is remotely installed and all control functions are performed at the door through a compact, 3” x 5-½” keypad. Initial installation set-up, opening and closing, as well as service and troubleshooting are all done through the remote keypad. The remote keypad may be installed as a flush or surface mount on any surface including drywall, steel or wood.

Perform control box functions from ground level
