# Wireless Crash Alert System

24-7-365 Remote door monitoring

# Remote Door Monitoring For Multiple Doors And Multiple Sites

## Wireless impact detector sends signal to cellular Gateway prompting real-time alerts

With the Hörmann wireless crash alert system, door downtime will be a thing of the past! This system can monitor up to 500 doors on a single network. When a door is hit, the wireless impact detector transfers data through the wireless cellular Gateway to a specified phone number as a call, a text or to an email, providing real-time alerts 24-7-365.

## Wireless impact detector with adjustable sensitivity

Minimize downtime by reducing the number of hits to your doors. Research shows that employees are more careful with company property if they know they are being monitored. By assigning numbers or location ID's to the high speed doors, the wireless crash alert system will send a notification when a specific door is hit; information that may be used to monitor chronic hits caused by human error. The impact detector device is attached to the door bottom bar and comes with an adjustable sensitivity function. Up to 500 doors can be monitored on a single network.

## Wireless cellular Gateway notification

When a door is hit, the wireless cellular Gateway receives notice of a hit and transfers the data to a specified phone as a phone call, a text message, or to an email. The door identification along with time of the hit is visible, real-time, to the manager. Example: Apartment / condominium building managers can respond to a door issue before receiving a complaint from a tenant, eliminating downtime and discontent.

## Optional local alert LED display box

For applications within close proximity to the door, an optional local alert LED display box is available which sounds an audible alert and displays critical details about the door that was hit, including door number, time of impact and more. This is ideal for locations that have maintenance crews on-site and available to respond immediately.
